Deployment:
-Ensure a postgres database named 'gitbread' exists with the tables from GTB_DDL.sql. Also ensure the password in server.js is set correctly.
-Navigate to your gitthisbread_main folder
-Start the backend by navigating to the 'back' folder.
-type 'npm install'
-type 'node src/server.js'
-To start the React frontend, navigate back to the main folder
-type 'npm install'

-type 'npm start'

-The Node server and React development server should now be started and accessible at http://localhost:3000

-Use a Chrome browser with the flag --disable-web-security to ensure the development servers work correctly.
